

HW6 - DCGAN

Generate the picture

- Dataset description
- Goal
 - Resize the pictures
 - 觀察生成的圖片
- Content
 - CelebA dataset: 約2,000,000張人臉圖片
- Ref
 - <https://github.com/znxlwm/pytorch-MNIST-CelebA-GAN-DCGAN>
 - <http://mmlab.ie.cuhk.edu.hk/projects/CelebA.html>

程式內容&檔案簡介

1. celebA_data_preprocess.py : Resize pictures
2. pytorch_CelebA_DCGAN.py : DCGAN架構&訓練

先將Dataset裡的照片resize，再丟進DCGAN裡做訓練
將會輸出每個Epoch生成的照片

| > HW6_DCGAN | | | | |
|---|-------------------|-------|-------|--|
| 名稱 | 修改日期 | 類型 | 大小 | |
|  celebA_data_preprocess.py | 2019/5/19 上午 0... | PY 檔案 | 1 KB | |
|  pytorch_CelebA_DCGAN.py | 2019/5/19 下午 0... | PY 檔案 | 10 KB | |

程式內容說明

- celebA_data_preprocess.py : Resize pictures

```
# root path depends on your computer
root = 'D:/users/leognha/Desktop/GAN/DCGAN/data/celeba/img_align_celeba/'
save_root = 'data/resized_celebA/'
resize_size = 64
```

設定讀取位置&Resize後的圖片的儲放位置

```
if not os.path.isdir(save_root):
    os.mkdir(save_root)
if not os.path.isdir(save_root + 'celebA'):
    os.mkdir(save_root + 'celebA')
img_list = os.listdir(root)
```

若無此資料夾則創建資料夾

```
# ten_percent = len(img_list) // 10
```

```
for i in range(len(img_list)):
    img = plt.imread(root + img_list[i])
    img = imresize(img, (resize_size, resize_size))
    plt.imsave(fname=save_root + 'celebA/' + img_list[i], arr=img)
```

顯示Resize進度

```
if (i % 1000) == 0:
    print('%d images complete' % i)
```

程式內容說明

- pytorch_CelebA_DCGAN.py : DCGAN架構&訓練

```
138 # training parameters 調整參數
```

```
139 batch_size = 128
```

```
140 lr = 0.0002
```

```
141 train_epoch = 10
```

```
142
```

```
143 # data_loader
```

```
144 img_size = 64
```

```
145 isCrop = False
```

```
146
```

參數調整，本次作業Epoch設定為10次

```
163 #Dataset路徑
```

```
164 data_dir = 'data/resized_celebA' # this path depends on your computer
```

```
165
```

設置資料路徑

```
208 # learning rate decay
```

```
209 if (epoch+1) == 11:
```

```
210     G_optimizer.param_groups[0]['lr'] /= 10
```

```
211     D_optimizer.param_groups[0]['lr'] /= 10
```

```
212     print("learning rate change!")
```

```
213
```

```
214 if (epoch+1) == 16:
```

```
215     G_optimizer.param_groups[0]['lr'] /= 10
```

```
216     D_optimizer.param_groups[0]['lr'] /= 10
```

```
217     print("learning rate change!")
```

```
218
```

```
219
```

```
220
```

可分階段調整Learning Rate，以便有更好的效果

作業流程

1. 先下載celebA Dataset
2. 將Dataset裡的照片resize (celebA_data_preprocess.py)
3. 訓練DCGAN模型 (pytorch_CelebA_DCGAN.py)
4. pytorch_CelebA_DCGAN.py 將會記錄每個Epoch Generator生成的照片

作業要求

- 繳交時間: 6/5 11:59pm.
- 觀察每個Epoch Generator生成圖片的變化
- 畫出Generator/Discriminator的Loss curves
- 計算生成對抗網路訓練的總時間需要多少?說明模型訓練完成後，如何在測試階段產生新的生成結果?
